FOR IMMEDIATE RELEASE:

RE-DEFINING THE SOCIAL HUB

Glass Kitchen Islands from ThinkGlass Add Instant Drama!

(Boisbriand, Quebec – January 31, 2012) Like it or not, everybody always ends up in the kitchen. And a well-designed island can be the social hub for people to congregate in style and inspire great conversation. ThinkGlass is leading this design trend with their dramatic glass kitchen island tops.

The glass freestanding island instantly becomes the focal point of a kitchen -- the icon of any modern kitchen! But don't be fooled by its good looks, it can also withstand the rigors of daily use in the kitchen. ThinkGlass island tops are cast in a single piece, so there are no cracks or weakness and at a minimum of 1.5-inches thick, the glass is as hard as stone. And glass island tops reflect light and open up small spaces making them appear larger.

These gorgeous glass island tops are multi-functional; they can be used as an extra prep space, a casual dining table or with the help of integrated LED lights – a funky, illuminated cocktail bar. There is also ample room underneath for extra storage space. Glass island tops boast an infinite design versatility. Depending on the style chosen, they can easily compliment contemporary or traditional surroundings.

Because glass is a non-porous surface that means there are no crevices to harbor harmful bacteria, mold or mildew. Glass requires no annual sealants and can be easily cleaned with any commercial glass cleaner or with simple soap and water. What's best is the textured finish of the glass island tops that hides fingerprints and smudges. All the glass used by ThinkGlass contains 25% recycled materials, and their finished glass products are 100% recyclable with no additives, glue, resin or laminates.

About ThinkGlass

The ThinkGlass story began eleven years ago in an empty room under the leadership of two creative individuals who were passionate about beautiful glasswork. Today, the company is one of the most successful glass design and manufacturing studios in the world with a shop that encompasses more than 30,000 square feet, 27 employees and 17 state-of-the-art, custom made ovens. ThinkGlass is still headed by its two original founders – glass master Michel Mailhot who is the artistic soul of the company, and Bertrand Charest, a certified engineer and company president. Together with their talented team, they produce all manner of glass masterpieces, from residential kitchen to bathroom vanity countertops and backsplashes to fantastical sculptures, wall murals and floor tiles, and even large-scale commercial projects for restaurants, nightclubs and offices.

As a leader in the thermoforming industry, ThinkGlass has pioneered a versatile technique that allows the creation of new or repetitive textures at a very low molding cost. This process allows ThinkGlass to create glass slabs without thickness constraints and opens the door to all kinds of design possibilities. All ThinkGlass creations are made from 100% recyclable glass using sustainable practices and without the use of any adhesive or sealant potentially contained harmful volatile organic compounds (VOCs).
